

# Ecosystems and Water Resources of the Central California Flood Plain: A Workshop

- When:** June 12-15, 2018 including day trip to wetlands.
- Where:** Scout Island and other locations.
- Who:** K-12 Teachers, informal educators, after school staff
- Stipend:** \$200.00 - upon completion of all course requirements

The 2018 Central Valley Flood Plain Ecology Workshop will include examples of NGSS aligned curriculum with a focus on California water issues, watershed ecology, riparian ecology, California habitats and Project WET activities. The five types of California wetlands will be investigated: riverine, palustrine, marine, lacustrine, and estuarine.

- Meet and learn from leading water scientists and researchers.
- Receive *FREE* Education and the Environment Initiative (EEI), Project WET, NGSS, and other valuable classroom resources.
- Learn California Science Standards aligned field study and data collection techniques.
- California Science Standards (NGSS) lesson planning strategies.
- Field study by charter bus to various wetlands
- Part I of Project WET certification. Follow-up sessions to complete certification.
- 2 units CI 280T through Fresno State (additional fee).

Pre-registration required  
*Limited to first 30 participants – register soon!*

Register – Events on: <http://cvsamacademy.org>

Collaboration of the *Central Valley Science Project, Fresno State, CREEC, California Department of Water Resources, and SAM Academy, Inc.*
