
Fish Farm

Uses water to raise fish to maturity in rearing ponds, and to carry waste from the ponds.

Janitorial Business

Uses water to clean surfaces, wash windows and steam carpets in office buildings.

Ranch

Uses water to grow food and provide drinking water for livestock, and to clean their areas for living and feeding, transporting waste to holding ponds.

Tour Boat Business

Relies on scenic waterways to attract and convey passengers.

Vegetation

Plants use water for photosynthesis, to keep cool by transpiration and to transport nutrients to other parts of the plant.

Fishing Enthusiast

Enjoys casting line into ponds, slow-moving pools and another other body of water in quest of big fish!

Aquatic Insect

Thrives in various water environments and provide the food source for many other organisms living in riparian and aquatic environments.

Scuba Diving Business

Enjoys hunting for edible sea creatures or just simply exploring the wonders of underwater environments.

Fish

Trout, salmon, catfish are among a diversity of fish species living in water, eating organisms that live in water - or being eaten by other creatures.

Aquatic Mammal

Beavers, muskrats and otters depend on riparian and aquatic environments to locate food and shelter.
