

A River of Empire: the Colorado, Orange County, and the Coastal Ocean

Join Project Wet and UC South Coast for a watershed investigation as we venture from source to sea along the Colorado River, SoCal's "River of Empire." In day one of this two-day work shop we use remote sensing & field investigations to examine the relationship between the Colorado river system and the management of water supplies in the Orange Empire. Day two, we pivot and use a systems approach to consider how human choices intersect with natural systems in the coastal oceans.

Please join us October 5th and November 2nd, 8:00am - 4:00pm. Participants will receive:

- Award winning resources from Project Wet, the Bureau of Reclamation, and the California Coastal Commission
- A field experience at UC South Coast's agricultural research facility in Orange County. Prepare to get dirty as we get outside for NGSS learning
- Support for Key Science & Engineering Practices (SEPs): Constructing Evidence-Based Explanations & Conceptual Modeling

To Register: <http://ucanr.edu/survey/survey.cfm?surveynumber=28099> (Fee: \$45)
