

- ❑ A science-management partnership bringing together scientists and natural resource managers
- ❑ Provides relevant information to support sustainable ecosystems
- ❑ Crosses jurisdictional, political, and management boundaries

California LCC Strategic Plan

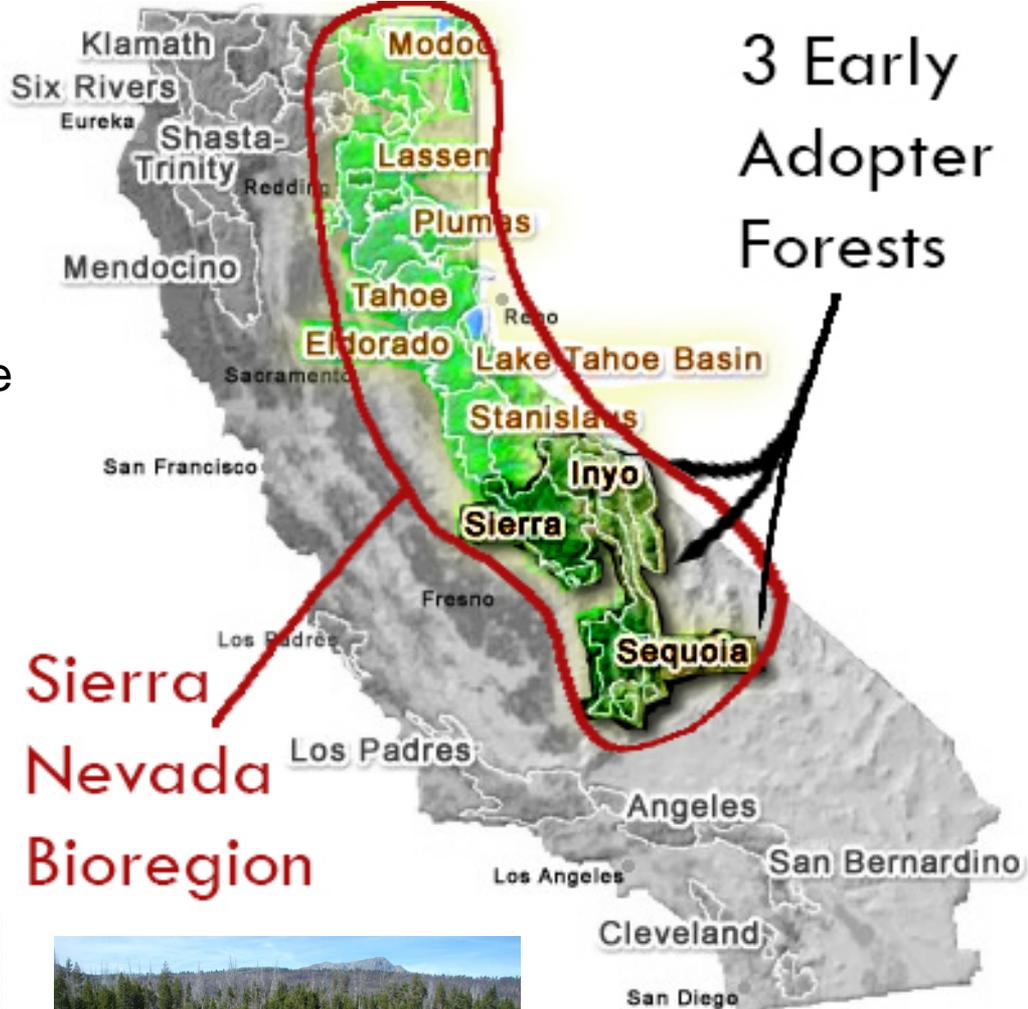

Five-year Goal – A growing community of resource managers, scientists, conservation practitioners, and others that is successfully advancing and implementing actions to promote resilient & adaptable ecosystems & landscapes in the face of environmental change.

- Objective 1**
Conduct & coordinate information exchange.
- Objective 2**
Enhance climate-smart conservation on a landscape scale.
- Objective 3**
Ensure CA LCC provides effective & lasting outcomes

Pacific Southwest Region National Forests in California

- ❑ California's National Forests encompass 20 million acres in 18 national forests.
- ❑ These lands produce about 45% of the state's water.
- ❑ Forest management is directed by a forest plan – these are currently being revised in 3 phases: (1) assessment, (2) plan revision, & (3) monitoring
 - All-lands context
 - Collaboration
