**FREE** WORKSHOP

# *Drought-Tolerant Landscapes:*

*Get the Latest on Sustainability Trends, Plant Selection & Nursery Tips*

*As California suffers through a fifth year of drought, cities and water districts throughout the state have made reducing outdoor irrigation – which can account for 50 to 80 percent of a home's total water use – a primary goal. The recent drought has led to an increased interest in low water-use landscaping.*

*But what varieties of drought-resistant plants are the best to tout in your region? And what is the latest trend in sustainable landscaping?*

*Get the answers to those questions and gain a better understanding of plant availability from the nursery industry. Learn tips on how to communicate that information to water customers and the general public.*

This **FREE**, one-day workshop includes a field trip to a local nursery. It is geared toward anyone working at water districts, city utility and water departments, landscapers and the nursery retail and wholesale industry.

**Topics to be discussed include:**

- Latest trends in sustainable landscapes
- Constraints on plant availability & nursery industry coordination
- Landscape makeovers & climate change considerations

**WEDNESDAY, MAY 18, 2016**

California Center for the Arts  
340 North Escondido Boulevard, Salon 1  
Escondido, CA

Sponsored by

WATER EDUCATION  
FOUNDATION

Check-in/registration begins at 9 a.m. Complimentary coffee will be served. The program runs from 9:30 a.m. to noon and from 1:30 to 3:30 p.m. Lunch is on your own.
