Remote Sensing Applications for U.S.-Mexico Border
Water Management

Present 3 stories

- ∅ Colorado River Delta, a Landsat perspective of Inundated areas
- ∅ Water Bodies in Ca-BC Peninsular Range Draining to the Pacific, detection and measurement
- ∅ April 4th 2010 M7.2 earthquake, effects though remote sensing data and techniques

Landsat Perspective of Colorado River Delta

- ∅ Inundated areas(1972-2002) in the Colorado river (CR) delta and relation with flow US->Mex

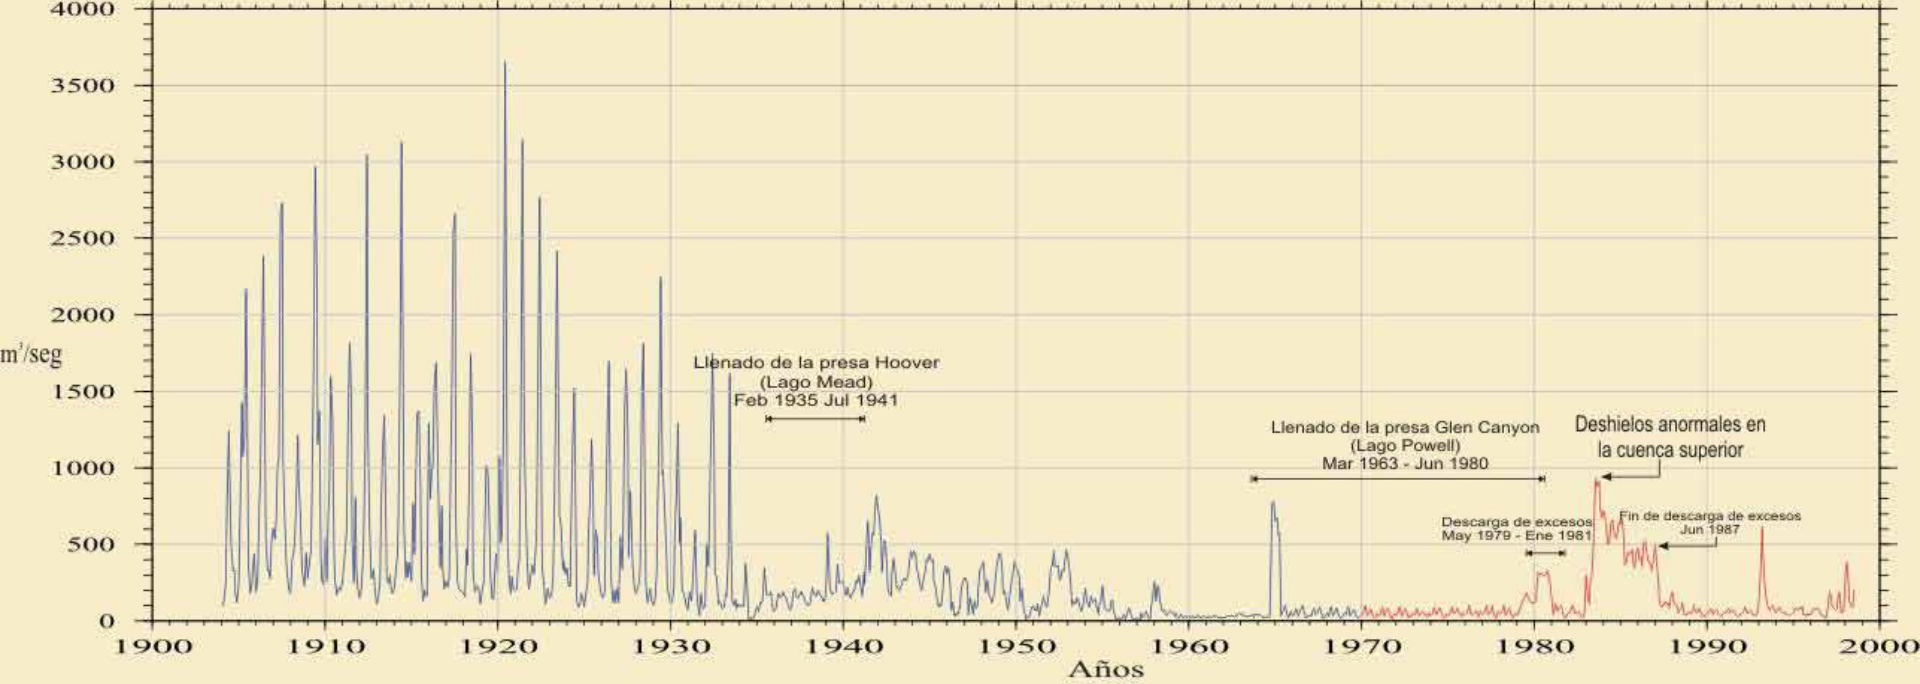

Colorado River Water allocation

Mexico
9%
1.5 MAF / 1,851 Mm³

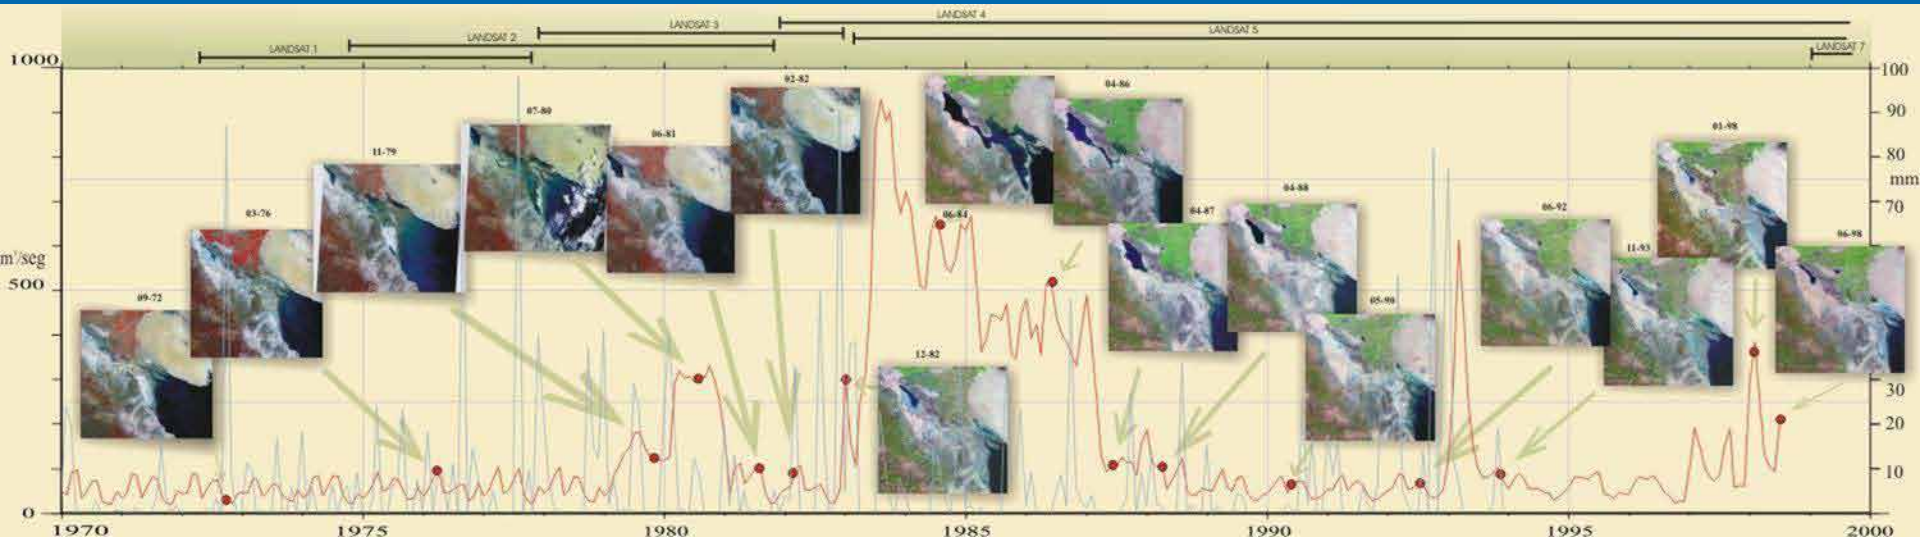

U.S. Lower/Upper Basins
45% each
7.5 MAF / 9,251 Mm³

US->MEX CR Flow under Landsat Record

Landsat images used

250 Landsat previews 1972-2002
 Assemble contemporal mosaics
 Delineate water bodies

Landsat Scenes 84-06

Date	Path/Rows
13 April 1984 24 May 1990 3 Jun 2002 * 25 Aug 2006	38/37-38, 38/38*
06 June 1984 25 May 1990 23 April 2002 * 9 May 2005 17 Sep 2006	39/37-38, 39/38 *
1 May 1988 ! 2 April 1989 * 31 Oct 1999 ! 24 April 2000 14 April 2005 08 Sep 2006	40/37-38 40/37 * 40/38 !

1984 Flood
 1990 Drought

water detection with TM band 5

Colorado River flow record U.S.A => México
 1970-2002 and areal extent of inundation of
 wetlands

Delta 1972-2002

Water Bodies(WB) in Peninsular Ranges draining to the Pacific, detection and measurement

- ∅ Dataflow (process) to detect WB based on water absorption/reflective properties of water under Landsat TM spectral bands (band 5; 1.55-1.75 μm)
- ∅ Atenuate the effects of false WB detections due to terrain/cloud shadows
- ∅ Test WB detection and areal estimation on Landsat TM images 1984,1990, 2000, 2005 and 2006.

Shades prediction on images based on Sun position

Sombras producidas por relieve o nubes producen firma similar al agua en la banda 5 (gran absorción).

- Para cada imagen conocemos la posición del sol.
- Se acentúa el efecto en imágenes de otoño e invierno

Podemos inferir sombras por relieve utilizando

- Elevación y azimut del Sol
- Modelo digital de elevación SRTM

Si pendiente es $>$ umbral pendiente

y aspecto es $(\text{Azimut} + 180^\circ) \pm \Delta^\circ$

Entonces posible zona productora de Sombra

General Algorithm to infer shades and WB

Shaded Areas prediction (DEM, Sun's Azimuth & Elevation)

IF SLOPE > SlopeThreshold

AND ASPECT between (Azimut +180°) $\pm D$ (30..45°)

THEN SHADE

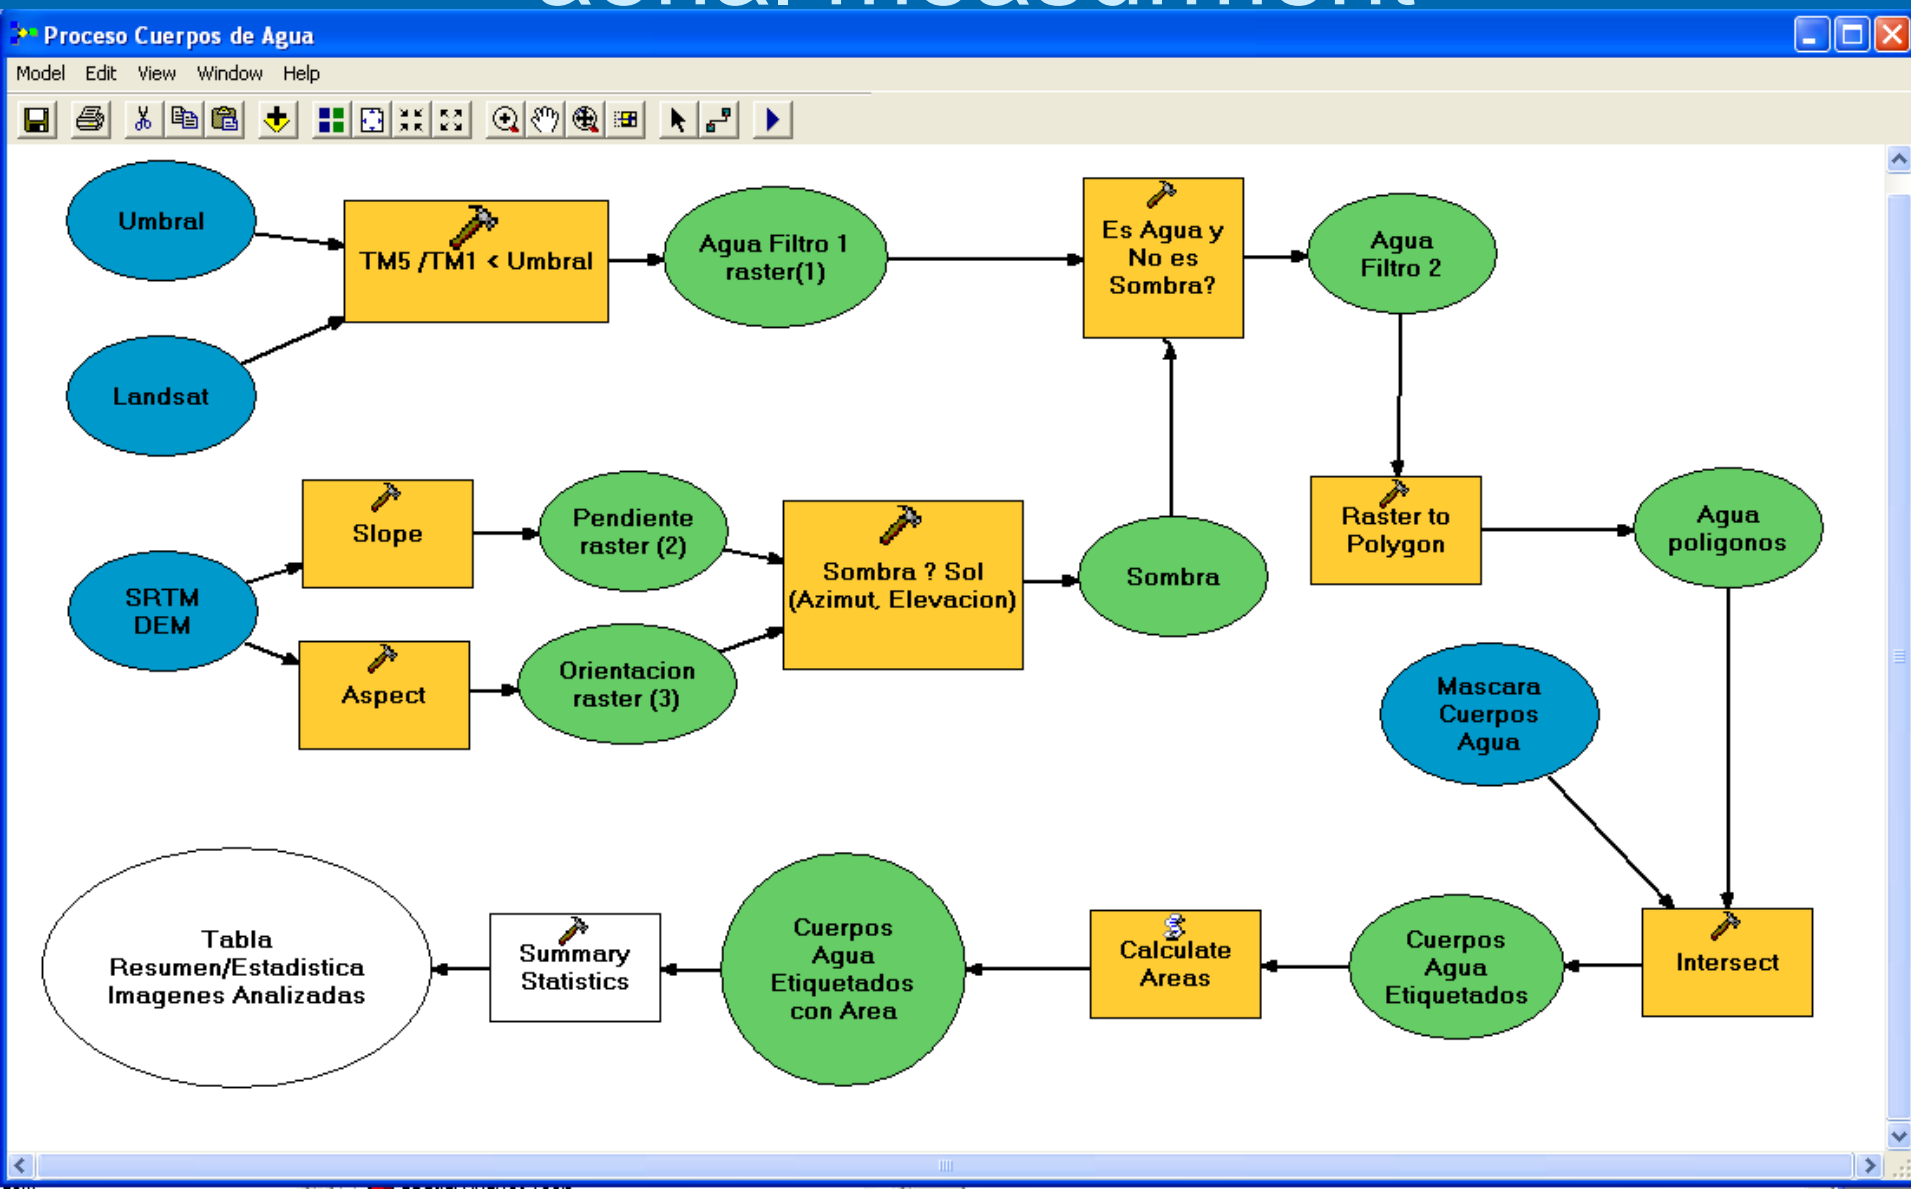

Water detection

IF B5/B1 < Threshold AND NOT a SHADE

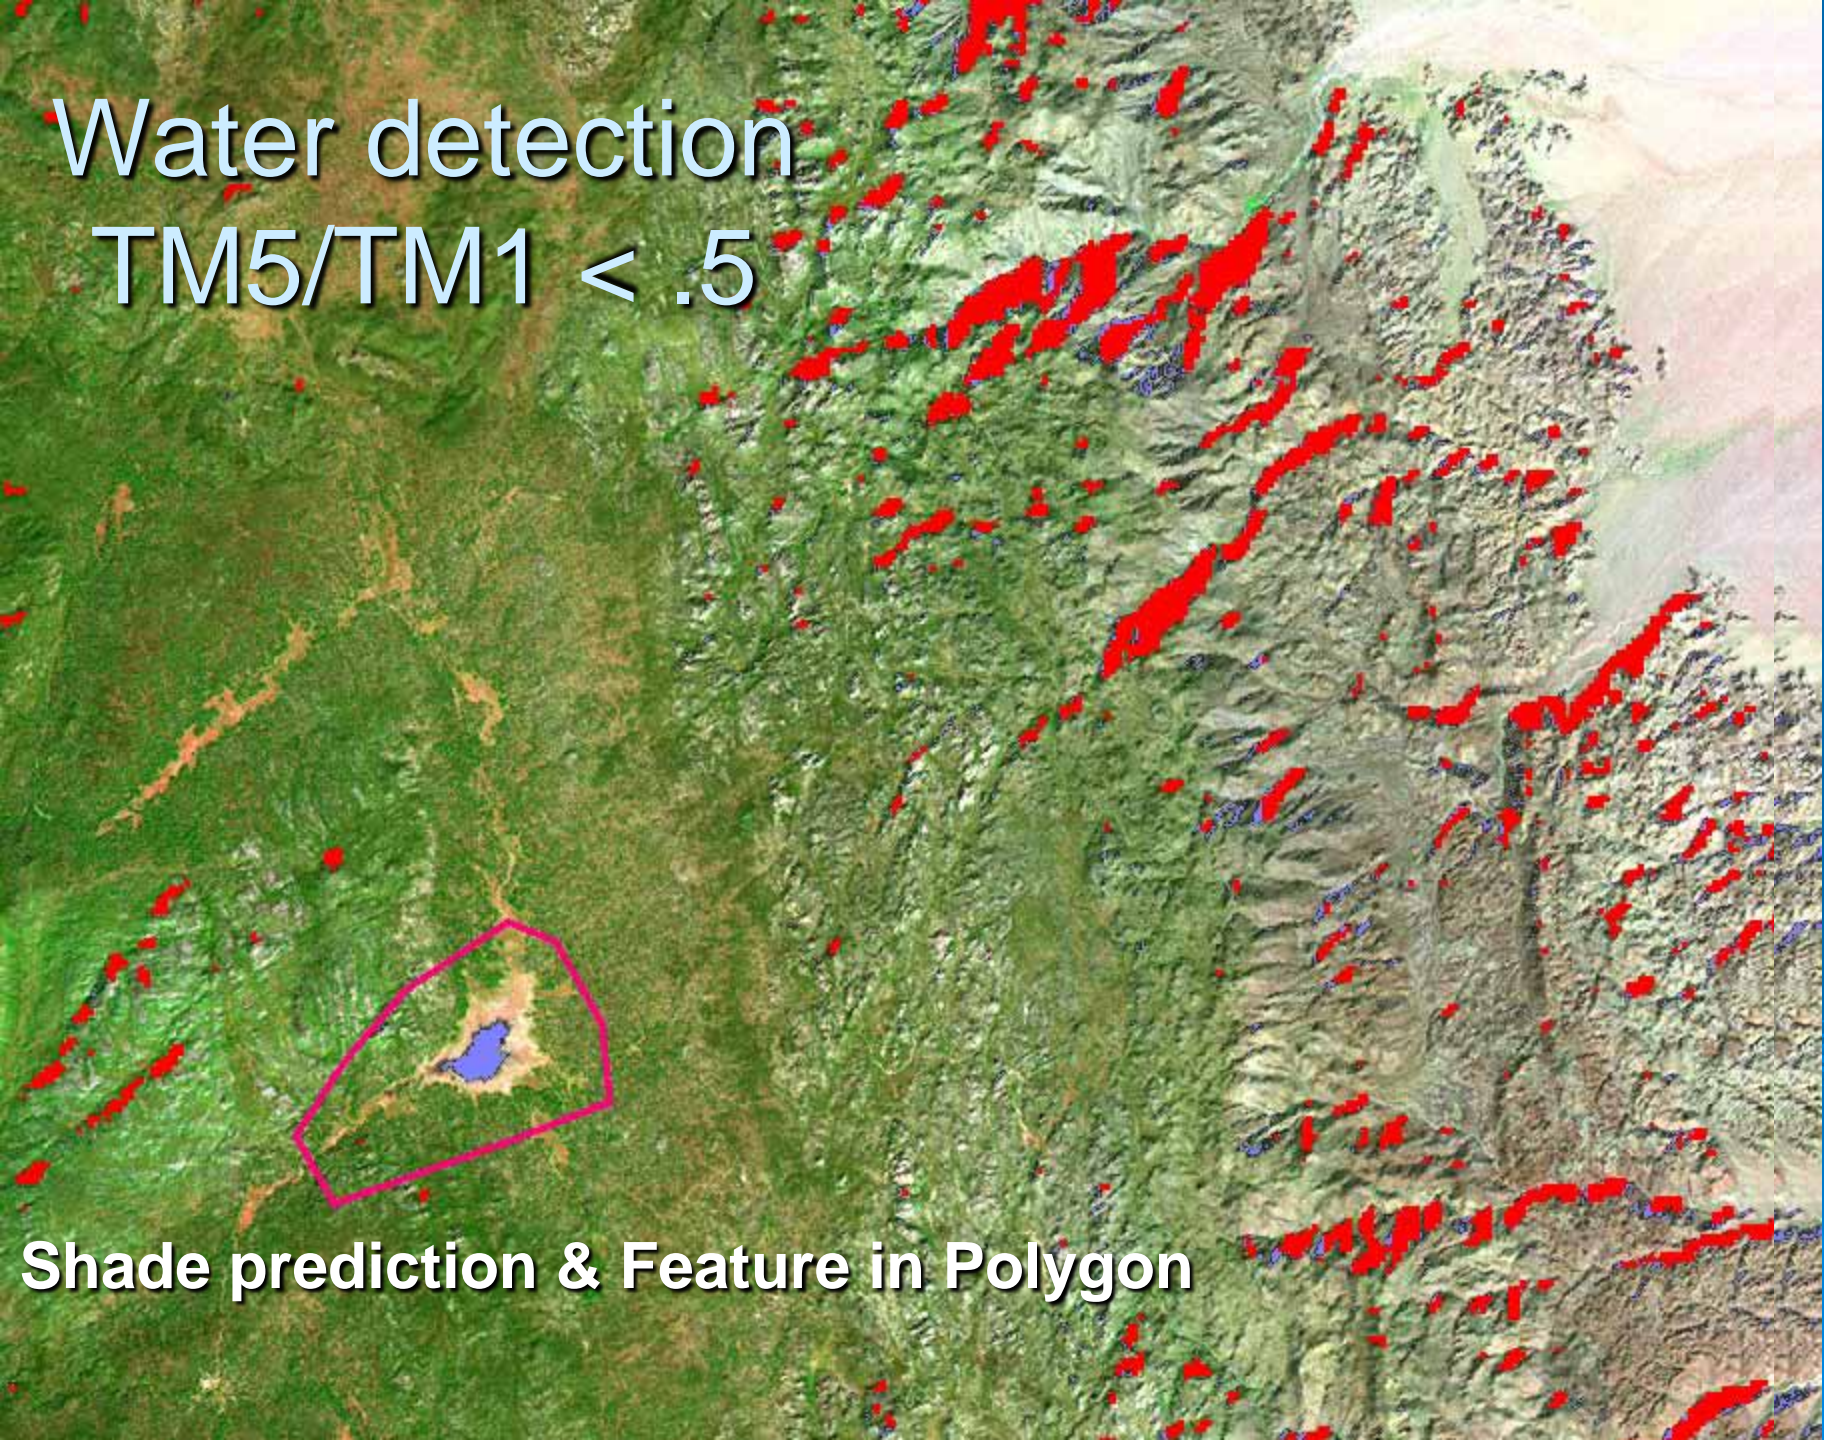

THEN WATER

Workflow for WB detection and aerial measurement

Water detection
 $TM5/TM1 < .5$

Shade prediction & Feature in Polygon

1990

98 ha

2000

343 ha

2006

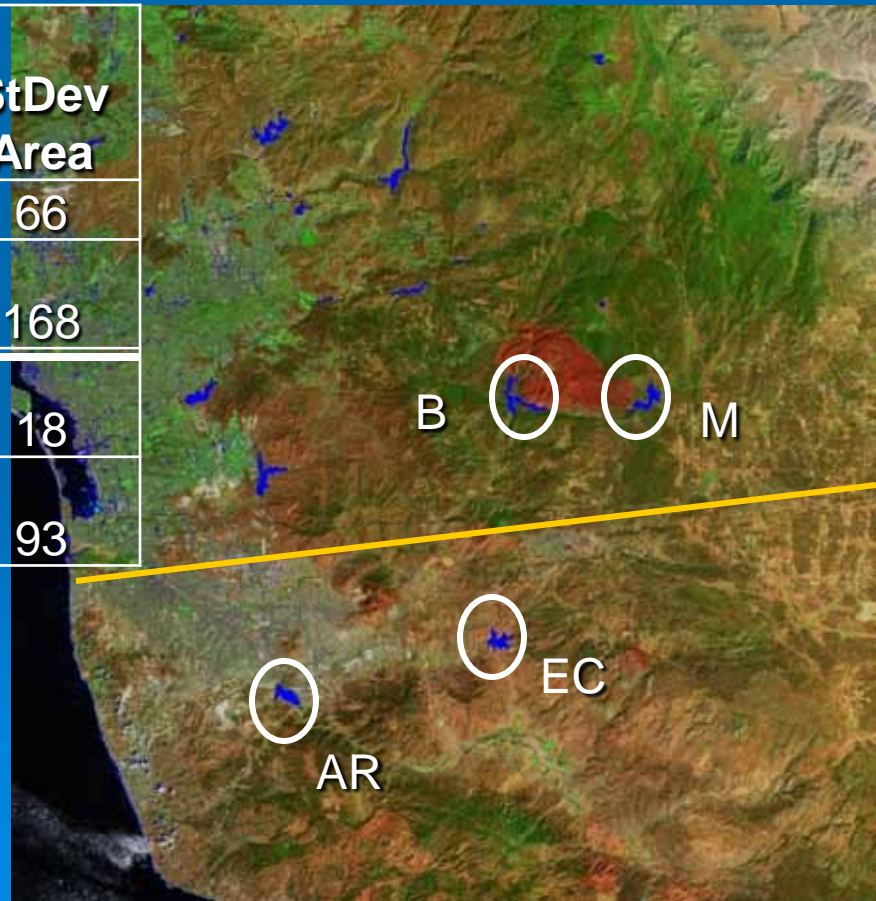

188 ha

Aerial report summary for 4 WB 1984-2007 (17 Scenes)

B= Barret Lake, M=Morena Reservoir,
EC=El Carrizo Dam, AR=Abelardo Rodriguez
Dam

Water Body	Mín Area Ha (Year)	Max Area Ha (Year)	Scenes	Avg Area	StDev Area
B	104(89)	287(84)	8	201	66
M	98(90)	580(84)	9	294	168
EC	152(89)	217(05)	11	196	18
AR	68(89)	314(05)	7	179	93

Water Bodies concentrate for the California-Baja California Region, 1984-2007 (17 Scenes)

State-Cty	Sum of Max Areas in Ha	Number WB > 4 Ha	Avg size WB in Ha	Largest WB in Ha
BC-Mex	867.	12	41.	314.
Ca-USA	11851.	62	127.	1865.

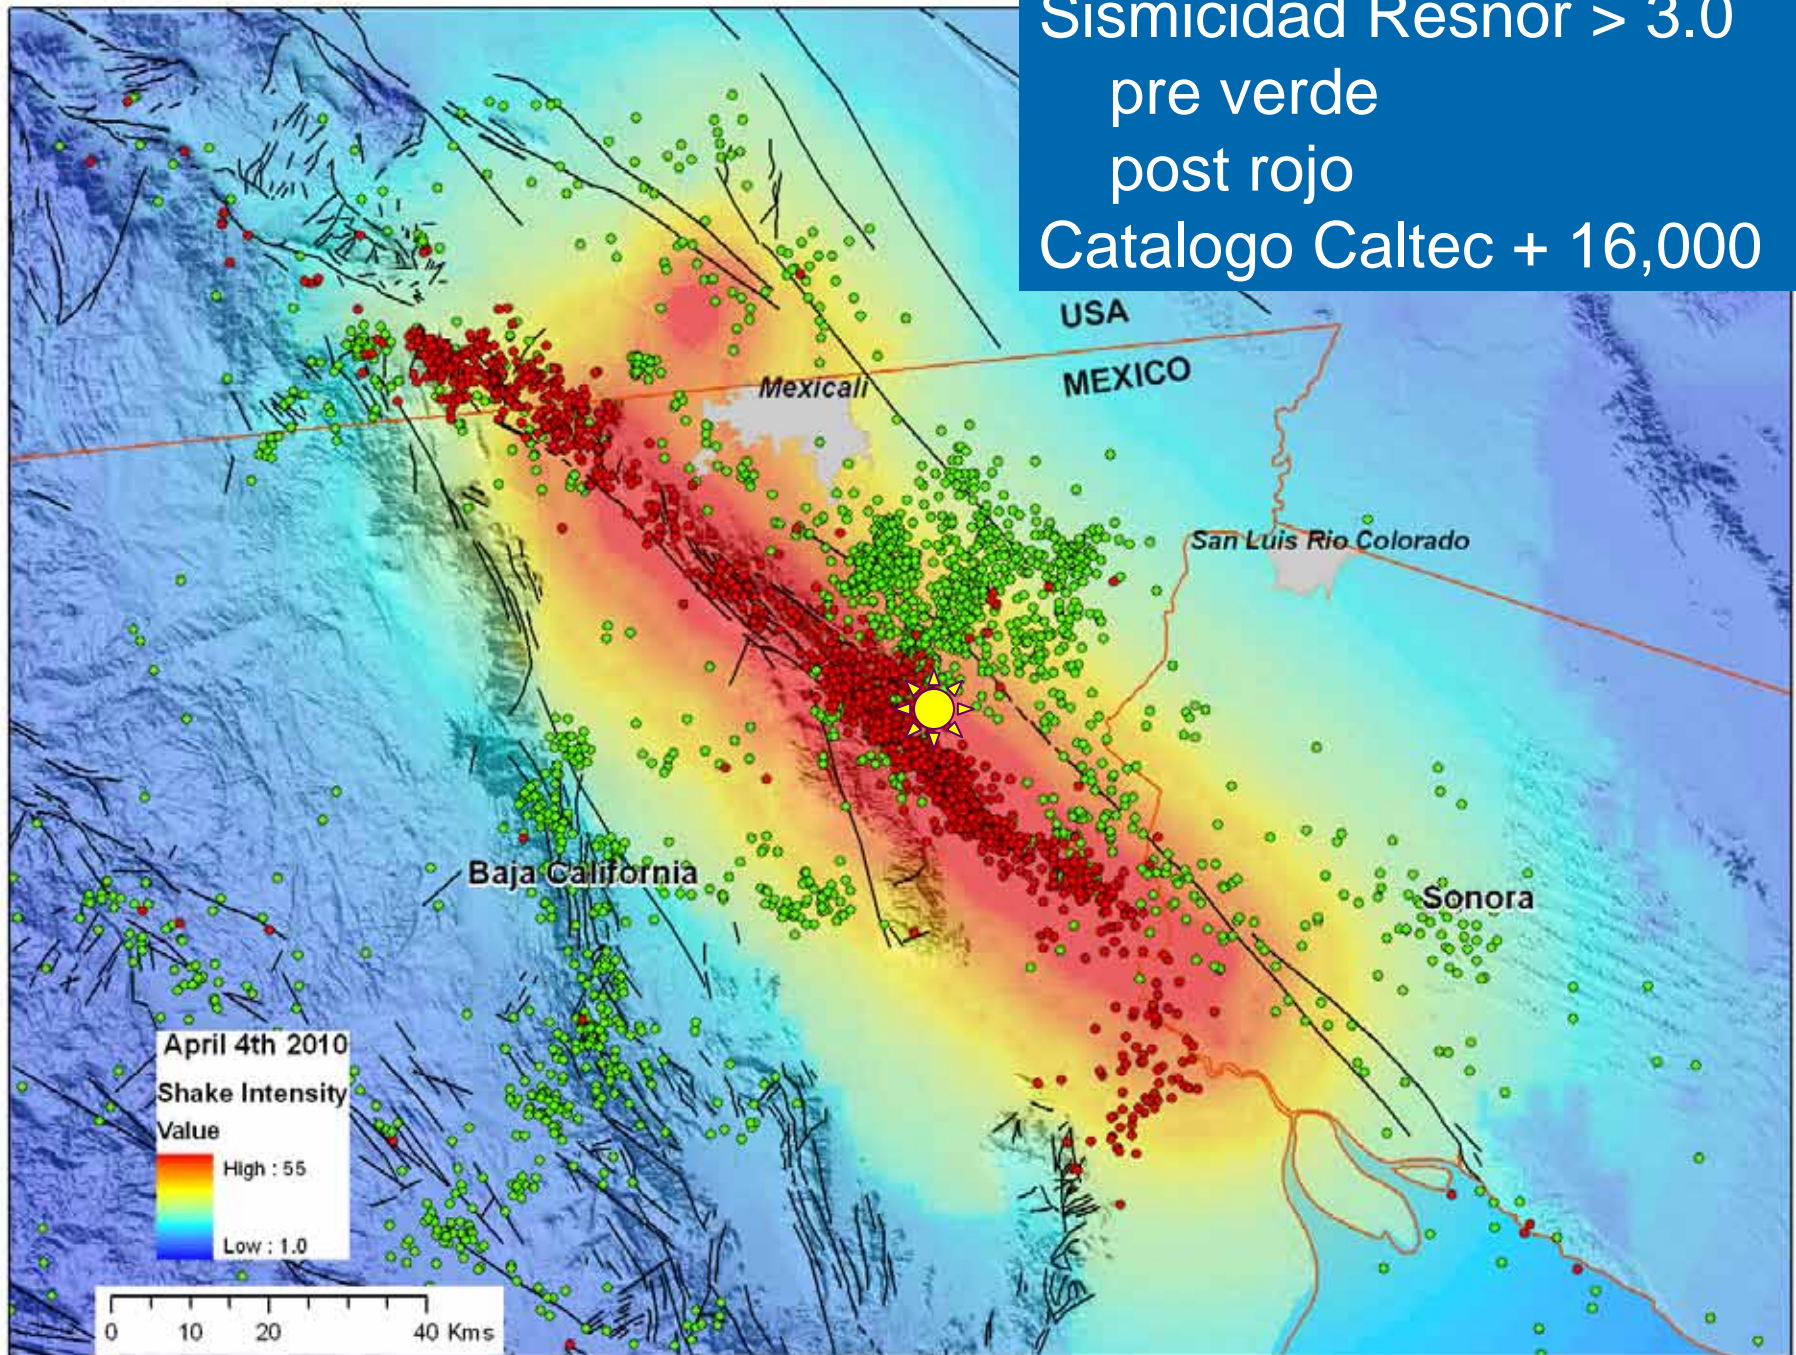

Ratio CA/BC of 13 in Area and 5 in number of WB

April 4th 2010 M7.2 earthquake, Mexicali Earthquake effects through remote sensing data and technique.

A story of:

- Perfect target area: previously measured, scarcely vegetated, close to the border
- Spontaneous binational collaboration, mutual interest, started from personal contacts.
- Before and after the EQ with different RS techniques
 - Laser ranging (LIDAR) aerial and terrestrial
 - Radar interferometry
 - Optical images correlation
 - GPS, seismic,.....

Terrestrial Lidar Surveys (TLS) surface rupture: UC Davis, U Kansas, CICESE

- 2010 (+12 days EQ)
- 2011 (+ ~ year)

Comentarios finales

- ∅ Proceso de asimilación de tecnología
Resultados preliminares
- ∅ Análisis de los efectos del sismo a través de la comparación de modelos de elevación pre-post sismo
- ∅ Asimilación de otras tecnologías multitemporales:
 - | Cosis-CORR (satelital y fotos aéreas) e
 - | interferometría de radar

Final comments

- ∅ Importance of RS archives, it enables to study our changing world, value of Landsat record (1972-current)
- ∅ Importance of personal contacts
- ∅ Multisensor approach to analyze the same phenomena, enlightening experience
- ∅ Simple useful RS applications

Thank you!

Acknowledgments:

University of California UCMEXUS,.....

Final Comments

- ∅ Landsat record and RS/GIS techniques enable to quantify the contrasts related to water and vegetation along the CaUSA-BCMex border region
- ∅ The TM5/TM1 segmentation, simple technique to detect surface water although confusing shades (clouds and landscape) have to taken care:
 - ∅ Shade prediction using DEM and Sun's Position
 - ∅ Max Bounding polygons
- ∅ Ratio CA/BC WBs of 13 in Area and 5 in number of WB
